

Abhishek Desai

.NET & SQL Developer | 9+ Years Enterprise Experience | Finance · Real Estate · Healthcare

avdesai900@gmail.com • +1 (540)-724-1408 • linkedin.com/in/abhishek-v-desai-273594311

PROFESSIONAL SUMMARY

- Results-driven **Full-Stack .NET & SQL Developer** with 9+ years delivering enterprise applications across finance, real estate, and healthcare — clean architecture, solid data models, close stakeholder collaboration.
- Deep **ASP.NET Core, MVC, Web API, Entity Framework, ADO.NET, WCF** and **WPF** expertise — consistent delivery of production-grade **C# and VB.NET** codebases across finance, healthcare, and real estate.
- Advanced **SQL Server (2000–2019)** and **Oracle (9i–11g)** database skills — schema design, **T-SQL/PL/SQL** development, **SSIS/SSRS** pipelines, and measurable performance tuning on live systems.
- Builds high-performance SPAs using **Angular (8–14)** and **ReactJS** with **TypeScript** and **ngrx** — Micro Frontend architecture enables independent team deployment without bottlenecks.
- SQL Server** and **Oracle** performance specialist — reads execution plans, uses **SQL Profiler** and **Query Store**, delivered up to **60% of the query performance improvements** on live production systems.
- Proven data engineering at Citigroup — **PySpark ETL pipelines** on millions of records, automated validation workflows (**+25% compliance accuracy**), and **Power BI** dashboards with custom **DAX** measures.
- Hands-on **Python** and data engineering — **PySpark** distributed processing, **ETL pipeline design**, validation scripting, and hybrid SQL-PySpark workflows for compliance-critical enterprise environments.
- Experienced in **SQL Server** to managed cloud instance migrations — schema validation, integrity checks, failover configuration, and cutover planning with **zero data loss** and minimal downtime.
- Skilled in **SSIS ETL** workflows, **SQL Server Agent** and **Autosys** scheduling, and **Jenkins CI/CD** pipelines — full DevOps ownership from code commit to production release.
- Experienced with **Docker**-based containerization and cloud-ready deployment practices — consistent environment parity across dev, staging, and production reduces release risk.
- Maintains clean **Git** feature-branch workflows, translates stakeholder requirements into sprint-ready stories, and keeps **Agile/Scrum** delivery velocity consistent across multi-year enterprise engagements.
- Azure-certified (**DP-300**) - production delivery migrated SQL Server workloads to **Azure SQL Managed Instance**, configure geo-replication, **PITR** backup, **Azure Monitor** query alert zero data loss, full HA maintained to cutover.
- Azure Fundamentals certified (**AZ-900**) and applied in production - **Azure Blob Storage** ETL landing zones, **Azure AD RBAC** access control, **Azure DevOps Pipelines** CI/CD - delivered across finance & real estate environments.

CERTIFICATIONS

- AZ-900: Microsoft Certified — Azure Fundamentals
- DP-300: Microsoft Certified — Azure Database Administrator Associate
- MySQL Bootcamp — Udemy

TECHNICAL SKILLS

Languages	C#, .NET, T-SQL, PL/SQL, Python, TypeScript, JavaScript, VB.NET, C, C++
.NET Stack	ASP.NET Core, ASP.NET MVC, Web API, Entity Framework (4.1–6.0), ADO.NET, LINQ, Microservices, WCF, WPF, MVVM
Databases & BI	SQL Server (2000–2019), Oracle (9i–11g), MySQL, Azure SQL Database, Azure SQL Managed Instance, Power BI (DAX, Power Query), SSIS, SSRS, SSAS, SSMS
Data Engineering	Python, PySpark, SSIS, Azure Data Factory, Autosys, SQL Server Agent, ETL Pipeline Design, Batch Processing, Data Validation
Web & UI	Angular (8–14), ReactJS, AngularJS, HTML5, CSS3, TypeScript, jQuery, Bootstrap, AJAX, JSON, XML, Kendo UI
DevOps & Tools	Git, Jenkins, Docker, Azure DevOps, Azure Blob Storage, Azure AD, Azure Monitor, Visual Studio (2010–2019), VS Code, JIRA, Figma, SVN, TFS, Azure Repos, Excel

Testing	MSTest, NUnit, xUnit, JUnit, Jasmine, Mocha, Karma
Methodology	Agile/Scrum, Requirements Analysis, Stakeholder Management, Microservices, Micro Frontend, CI/CD

EDUCATION

Master of Science in Information Systems — Marshall University	2017 – 2018
Bachelor of Computer Engineering — Gujarat Technological University	2011 – 2015

PROFESSIONAL EXPERIENCE

Client: Prompt Realty & Mortgage	June 2024 – Present
Role: .NET / SQL Developer	

- Diagnosed slow API responses via **SQL Profiler** and **Query Store** — read execution plans, rewrote queries and stored procedures. Result: **60% faster API response, 40% better DB read performance**.
- Architected Micro Frontend SPAs using **Angular 10–14**, TypeScript, and **ngrx** — reusable component library cut front-end delivery effort by **25%**.
- Built the complete **SQL Server** data layer — normalized schemas, indexed views, stored procedures, scalar functions, **CHECK constraints, foreign keys, DML triggers**, and TRY...CATCH error handling.
- Designed **T-SQL** objects including CTEs, window functions, and dynamic SQL — supporting real-time property search and lead queries under high concurrency with consistent sub-second response times.
- Built automated **SSIS** pipelines consolidating property transaction and lead data into a centralized **SQL Server data mart** — enabling clean, reconciled **Power BI** reporting without manual data preparation.
- Built **Power BI** dashboards with custom **DAX** measures and **Power Query** on SQL Server — live visibility into listings, lead conversion, and agent performance with automated refresh schedules.
- Designed **OAuth2**-secured REST APIs with **ASP.NET Core, Web API**, and **Entity Framework** — agent lead submissions and property searches flow through a properly secured, structured pipeline.
- Created reusable **Angular TypeScript** component libraries (listing cards, search filters, lead capture) — reduced front-end delivery effort by **25%** per release cycle.
- Configured **RBAC** policies, firewall rules, backup schedules, and **Jenkins CI/CD** — cut deployment cycle time by **40%** and eliminated unpredictable manual release steps.
- Maintained feature-branch **Git** workflows with mandatory PR reviews — no unreviewed code reached main; any production issue traceable to source within minutes.
- Migrated SQL Server data mart to **Azure SQL Database** (DP-300) configured **PITR** backup retention, automated schedules, **Azure Monitor** performance alerts - zero data loss on cutover, sub-second query response preserved post-migration.
- Integrated **Azure DevOps Pipelines** with **Jenkins CI/CD** (AZ-900) staged SSIS loads via **Azure Blob Storage** and locked down pipeline access with **Azure AD RBAC** — deployment cycle time cut by **40%**, release risk eliminated.

Environment: Angular 10-14, TypeScript, C#.NET, ASP.NET Core, .NET Core, Web API, Entity Framework Core, OAuth2, Microservices, SQL Server, MSSQL, Azure SQL Database, SSIS, Power BI, SQL Server Agent, HTML5, CSS3, Bootstrap, Git, Jenkins, Azure DevOps, JIRA, Figma

Client: Citigroup	Feb 2022 – June 2024
Project: ASPEN Development Project	
Role: Data Engineer / Software Developer	

- Analyzed slow SQL queries via execution plan review and index gap analysis — composite indexes and stored procedure refactoring delivered **30% faster response** and **60% reduction in DB latency**.
- Designed **T-SQL stored procedures**, scalar functions, and **DML triggers** for ASPEN's compliance audit trail — every interaction captured and timestamped; audit retrieval time cut by **35%**.
- Designed **PySpark ETL pipelines** ingesting and transforming high-volume customer interaction datasets — automated validation workflows improved performance review metric accuracy by **25%**.
- Developed **Python** scripts for automated data sampling, anomaly detection, and pre-load quality checks — caught data integrity issues upstream before reaching the **SQL Server** reporting layer.

- Built ASPEN's role-aware SPA using **AngularJS**, **TypeScript**, and **ngrx** — permission-aware UI automatically adjusted data visibility per role (analyst, team lead, compliance reviewer).
- Built **Power BI** drill-through dashboards and **DAX** KPI scorecards with compliance leads — gave leadership genuine visibility into service quality and team efficiency trends.
- Configured automated **Power BI** refresh via **SQL Server Agent** — eliminated the daily manual export process that consumed analyst time before every leadership meeting.
- Integrated **PySpark** pipelines with **SQL Server** for large-scale compliance data migration — handled datasets too large for traditional SSIS alone.
- Built and maintained **SSIS** ETL packages with **Autosys** scheduling; migrated SQL Server workloads to managed instances — **zero data loss**, high availability throughout cutover.
- Led ASPEN service containerization using **Docker** — identical dev/staging/production environments eliminated environment mismatch issues and improved team deployment confidence.
- Translated complex regulatory requirements from sprint discussions into precise data models — reduced requirement-related defects surfacing in testing.
- Enforced structured **Git** branching and mandatory peer code reviews for all SQL and Angular changes — every change traceable, peer-reviewed, and reversible without production risk.
- Migrated ASPEN's compliance workloads to **Azure SQL Managed Instance** (DP-300) geo-replication, **PITR** retention, and **Azure Monitor** query alerts configured zero data loss, full HA sustained throughout regulated-environment cutover.
- Replaced legacy SSIS handoffs with **Azure Data Factory** pipelines (AZ-900) landed compliance datasets in **Azure Blob Storage** before PySpark transformation, with **Azure AD RBAC** enforcing least-privilege access across all pipeline resources.

Environment: *Angular 12+, TypeScript, AngularJS, C#.NET, ASP.NET, MVC, Web API, Entity Framework, Microservices, SQL Server, Azure SQL Managed Instance, Azure Data Factory, Azure Blob Storage, Azure Monitor, Python, PySpark, SSIS, Autosys, Power BI, Git, Jenkins, Azure DevOps, JIRA, xUnit, Docker*

Client: Citi Group

Jan 2021 – Feb 2022

Project: MSOffice-NPOI Migration

Role: .NET / Database Developer

- Refactored **T-SQL stored procedures** from cursor loops to set-based SQL operations — cut document generation processing time by **35%** with immediate user-visible impact.
- Built **PySpark** batch workflows with partitioning, broadcast joins, and in-memory caching of reference lookup tables — reduced batch metadata processing time by **30%** across migration runs.
- Extended **ASP.NET MVC** service layer with custom validation middleware and exception handling — replaced silent failures with loggable errors, reducing unhandled processing failures by **40%**.
- Led full **MSOffice COM to NPOI** migration — re-engineered bookmark-driven Word template processing, making the system deployable without requiring Office on the server.
- Applied table partitioning and covering indexes on document metadata tables — eliminated full table scans during peak loads, keeping the system within processing windows as volumes grew.
- Engineered modular **PL/SQL** packages in **Oracle** for document migration and template generation — new document types now extend an existing package rather than requiring logic rewritten from scratch.
- Built reusable **C# .NET** class libraries for document generation and template binding — new document types added by configuration across the NPOI codebase, not custom code.
- Wrote **Python** scripts for post-ETL validation — compared source/target counts, checked field-level values, and generated exception reports identifying exactly which records needed attention.
- Mapped all field binding rules and exception scenarios with document teams before coding — edge cases designed for upfront, not discovered late in UAT.
- Applied **DP-300** database administration practices during SQL Server migration — configured **Azure SQL Database failover groups**, PITR backup retention, and **Azure Monitor** alerts — document generation workloads kept recoverable and highly available throughout the NPOI cutover.

Environment: *AngularJS, C#.NET, VB.NET, ASP.NET MVC, ASP.NET Core, ADO.NET, Web API, SQL Server, Azure SQL Database, Azure Monitor, PL/SQL, Oracle, Python, PySpark, NPOI, MSOffice Libraries, Git, TFS, NUnit, MSTest, JIRA*

Client: Citi Group

Aug 2019 – Jan 2021

Project: Inventory Tracking Application**Role:** .NET Developer

- Improved system performance by **25%** restructured **SQL Server Agent** batch jobs, applied partition-based segmentation, and targeted **T-SQL** index tuning to eliminate nightly full table scans.
- Authored **T-SQL stored procedures**, scalar functions, and **DML triggers** across task update and attestation workflows — full timestamped audit trail captured via triggers and history tables.
- Built **ASP.NET Web API** service endpoints for task lifecycle management and control attestation workflows — structured **C#** business logic layer enforced validation rules and returned clean, typed responses to the AngularJS front-end.
- Developed dynamic **Angular** data-binding components and **ngrx**-driven state management for the risk registry dashboard — real-time task status updates and role-filtered inventory views without full page reloads.
- Designed a role-aware SPA using **AngularJS** and Bootstrap with **ASP.NET** — unified interface for MIS teams, risk registry owners, and attestation users, eliminating disconnected system switching.
- Enhanced **SSIS** packages with row-level failure capture; automated period-end reporting via **Autosys** and **Excel Power Query** — replaced error-prone manual processes with reliable, auditable workflows.
- Migrated SQL scripts from TFS to **Git**; contributed to Agile ceremonies in **JIRA**; executed unit, integration, and regression tests using **MSTest** — consistent sprint velocity and clean releases..

Environment: AngularJS, Angular, C#.NET, .NET Core, ASP.NET, ASP.NET Core, Web API, SQL Server, SSIS, Autosys, Power Query, Excel, ngrx, TypeScript, MSTest, xUnit, Git, TFS, JIRA

Client: Humana

Apr 2019 – Aug 2019

Project: MedEvoSites**Role:** .NET Developer

- Optimized **SQL Server stored procedures** and **T-SQL** queries for patient record retrieval — applied index tuning and query restructuring to improve dashboard load times under high-volume concurrent access.
- Designed **ASP.NET Web API** endpoints consumed by **SSIS** ETL jobs to pull validated clinical data from third-party feeds — bridging .NET back-end services with the data pipeline layer for reliable medical record ingestion.
- Built **C# .NET** service layer components for clinical data transformation and business rule enforcement — integrated **ASP.NET MVC** with **Entity Framework** to ensure accurate, validated patient data flow.
- Developed **SSIS** ETL jobs for medical record dashboards, optimized **SQL Server** stored procedures and DML triggers, and integrated **Autosys** to schedule and monitor critical enterprise pipeline processes.
- Collaborated with clinical business analysts and compliance officers to gather, document, and validate functional requirements — translated regulatory constraints into clearly scoped development tasks, reducing UAT rework.
- Collaborated across Agile sprints with clinical workflow analysts and QA using **JIRA** and **Git** — delivered healthcare features on schedule to the quality standards a compliance-sensitive environment demands.

Environment: AngularJS, ReactJS, TypeScript, C#, ASP.NET MVC, ASP.NET Core, Web API, Entity Framework, ADO.NET, Node.js, MS SQL Server, SSIS, Autosys, Git, TFS, JIRA, xUnit, MS Office

Client: Lamda India

2014 – 2016

Project: Website and Product Information**Role:** Web / UI Developer

- Wrote **T-SQL stored procedures** and parameterized queries for product search, category filtering, and inventory management — data integrity enforced via constraints and **TRY...CATCH** error handling.
- Built responsive healthcare e-commerce pages using **HTML5**, **CSS3**, **Bootstrap**, and **ReactJS** — reusable modular components with dynamic **Node.js** REST API-driven data modules keeping product info live.
- Managed **SQL Server** structures and **SSIS** ETL processes for the healthcare product catalog — maintained schema documentation and collaborated in an Agile team using Git feature branch workflows.
- Worked directly with the client to gather product display, catalog requirements, incorporated feedback across iterative release cycles, delivered UI updates aligned with business priorities - building strong client communication.

Environment: HTML5, CSS3, ReactJS, JavaScript, Bootstrap, AJAX, XML, JSON, Node.js, MS SQL Server, SSIS, Python, Visual Studio, Git, TFS, JIRA
